Product Menu

[Menu Wizard](#)
Use this page to edit the menu structure of product families, submenus and associated products.

[Menu Tree](#)
This is a slightly advanced version of the Menu Wizard designed for Internet Explorer 5 Windows. It may fail on other browsers or even crash them.

Product preview page

Shows products as displayed on public site.

Clicking the **edit** link opens the product update form (next page).

Product menu tree

Menus, Submenus and Associated products can be arbitrarily assigned on three levels.

The tree structure can be collapsed (DHTML/XML).

Clicking the edit links will open appropriate property forms for menus, submenus or products.

Submenu properties form

The top box contains a field to change the menu name and a tick box to deactivate the menu (deactivated items stay in the database but are hidden from public display)

The second box shows the order of associated children. The drop-down list next to each menu item contains all possible positions within the current menu (e.g. 1-7) plus **Remove** option.

Selecting any of these options results in immediate reorganisation of the menu. E.g. selecting 3 on the drop-down list of the item that is currently positioned at 7 will move that item to position 3 and rearrange other items accordingly.

The third box shows a drop-down list with all available children from the database. Selecting any option and pressing the **Add** button will add the choice at the end of the current menu.

Inactive options will appear in angular brackets in the drop-down list.
